

What is Replit?

Repl.it is a free IDE (integrated development environment) that permits users to write their personal programs and code in dozens of languages. While conventional IDEs are software programs applications downloaded to a computer, Repl.it is completely browser-based and can be accessed from any internet-enabled tool along with a phone, tablet, or computer.

For our exercises, we will be using **REPLIT** as a browser-based code editor. This has some of advantages:

- This is an internet browser application. There is no need to download anything.
- Add-ons are easy to install.
- Auto-saving onto the cloud. You also can download all the documents if you are offline.
- Debugging.
- It also has a console and uses Linux (a popular operating system).
