

Getting help

In the previous example, we used the `dir` function to get a list ('directory') all the functions and values in a library.

And the `help` function gave us more information about a specific function, in this case the `math.log` function.

The documentation on the official Python website is also very helpful, but can be overwhelming at first. You will find this at <https://www.python.org/doc/>

The Tutorial and the Library Reference are probably the most useful parts.

Congratulations. You can now compare information in Python, which you will be using in the next chapter to clean up the data.
